Hello,

Thank you for reaching out to OpenAI Support.

We understand that you want to know the difference between each models, and we know how important it is to have clarity for that matter. Please be assured, we're here to clarify that.

The difference between "gpt-4o" and "gpt-4o-2024-05-13" lies in version control and update behavior:

- gpt-4o: This is a rolling alias that always points to the most current version of the GPT-4o model. It automatically includes the latest updates, improvements, and optimizations.
- gpt-4o-2024-05-13: This refers to a fixed version of GPT-4o released on May 13, 2024. It remains unchanged over time, ensuring consistent outputs regardless of future updates.

In summary, "**gpt-4o**" is ideal for accessing the latest capabilities, while "**gpt-4o-2024-05-13**" is better for consistent, unchanging results

If consistency and reproducibility are important (e.g., for research or testing), the dated version is recommended. If you want access to the latest enhancements, use the general gpt-4o alias.

Should you other concerns, feel free to let us know.

Best,
Junel
